

# A Plan to Save the Planet Documentary Film

It is our intent to produce a documentary film that explains how to solve the entire climate problem at the lowest cost to society. There are basically three types of climate films. Type I examines the problem. Type II looks at what we are doing about it. And Type III looks at what it takes to solve the entire problem. No one has ever created a Type III film, possibly because the size of the problem, and the size of solution, are difficult to comprehend. It is our goal to produce the first Type III climate film.

## PROJECT: Policy Making Tools Development

In theory, someone could create a website that generates a decarbonization plan for a nation, given user input. For details on what this might look like, see <https://www.aplantosavetheplanet.org/website>. This website does not exist, yet it could be developed. And it could be connected to the documentary film in some way. To move a website like this forward, project management would be needed to figure out where money comes from, and where it goes.

## PROJECT: AI's Solution to the Climate Problem Booklet

In theory, an insert could be placed into magazines that explains how to solve the entire climate problem at the lowest cost. For an example of what this might look like, see <https://www.aplantosavetheplanet.org/ai>. This could also be connected to the documentary film in some way. To move this forward, project management would be needed to figure out where money comes from, and where it goes.
